Raghav Gorani

Problem Statement

Safety Concerns

- Solo travelers, especially women, feel unsafe while traveling alone.
- Lack of verified companions increases risk

High Travel Costs

- No one to share taxi fares, hotel rooms, or fuel.
- Solo trips often become more expensive.

Loneliness & Boredom

- Traveling alone feels isolating.
- No one to share experiences, conversations, or fun with.

Uncertainty in Planning

- Difficulty in coordinating travel plans.
- Lack of guidance or trusted company for new places.

Proposed Solution

Smart Matching Platform

- Connects solo travelers with others going to the same destination at the same time.

Safe & Verified Travel

- Provides ID verification, block/report, and rating system to ensure safety and trust.

Cost Sharing & Social Travel

- Helps users share expenses (taxi, hotel, fuel) and makes journeys more enjoyable with company.

Privacy-Focused Communication

- Inbuilt chat system avoids sharing personal numbers, ensuring data privacy.

Support for Different Traveler Needs

- Options for students, professionals, tourists, and women travelers with customizable preferences.

Project Objectives

Connect Like-Minded Travelers

The platform matches users traveling to the same destination at a similar time. It also considers travel preferences, making journeys more comfortable and enjoyable.

Ensure Safety & Trust

Features like ID verification, ratings, and reviews help build user trust. Report and block options ensure a secure environment for all travelers.

Reduce Travel Costs

Travelers can share expenses such as taxi fares, hotel rooms, and fuel. This makes trips more affordable, especially for students and budget travelers.

Encourage Social Travel

Solo trips turn into social experiences with the right companion. This reduces loneliness and adds fun, making travel more memorable.

Data Dictionary

User :

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	userId	int	6	Primary Key	Unique identifier for the user
2	name	string	50	-	User's full name
3	email	string	20	-	User's email address
4	phone	int	10	-	User's phone number
5	password	string	12	-	User's password
6	age	int	2	-	User's age
7	gender	string	6	-	User's gender
8	travelPreference	string	25	-	Preference for travel
9	documentVerified	boolean	1	-	Status of User's identity verification
10	isBlocked	boolean	1	-	Indicates if the user is blocked

Data Dictionary

TravelPlan :

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	travelPlanId	int	6	Primary Key	Unique identifier for the travel plan
2	userId	int	6	Foreign Key	The ID of the user who created the plan
3	fromCity	string	30	-	The starting city of the journey
4	toCity	string	30	-	The destination city of the journey
5	travelDate	date	-	-	The date of travel
6	purpose	string	250	-	The purpose of type of the trip

Data Dictionary

Report :

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	userId	int	6	Foreign Key	The ID of the report
2	reason	string	250	-	The reason for the report
3	date	date	-	-	The date when the report was filed
4	status	boolean	1	-	The current status of the report

Data Dictionary

RatingReview :

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	userId	int	6	Foreign Key	The ID of the review
2	travelPlanId	int	6	Foreign Key	The ID of the travelplan who is being reviewed
3	rating	int	1	-	The numerical rating
4	review	string	250	-	The user review
5	date	date	-	-	The date when the review was submitted

Data Dictionary

Match :

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	matchId	int	6	Primary Key	Unique identifier for the match
2	travelPlanId	int	6	Foreign Key	The ID of the travelplan involved in the match
3	status	boolean	1	-	Indicates if the match is found or not

Data Dictionary

Chat :

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	chatId	int	6	Primary Key	Unique identifier for the chat
2	groupId	int	6	Foreign Key	Unique identifier for the group
3	timestamp	datetime	-	-	The time of the message
4	content	string	250	-	The content of the message
5	isConfirmTrip	boolean	1	-	Status of Trip confirmation

Data Dictionary

TravelGroup:

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	groupId	int	6	Primary Key	Unique identifier for the group
2	TravelPlanId	int	6	Foreign Key	Unique identifier for the travel plan
3	createdBy	int	6	Foreign Key	Unique identifier of the user who creates group
4	createdAt	datetime	-	-	The time when group created

Data Dictionary

TravelGroup
Member:

NO	FIELD NAME	DATATYPE	SIZE	CONSTRAINTS	DESCRIPTION
1	memberId	int	6	Primary Key	Unique identifier for the group member
2	groupId	int	6	Foreign Key	Unique identifier for the group
3	userId	int	6	Foreign Key	Unique identifier for the user
4	role	string	10	-	Role of the group member
5	joinedAt	datetime	-	-	The time when group member joined

Modules

User Registration & Login Module

This is the first step. In this part, users can sign up by entering their name, mobile number or email, and password. Once they create their account, they can log in whenever they want to use the site. This helps keep each user's data private and secure.

User Profile Module

After login, users can complete their profile. They can add their photo, age, gender, and a few lines about themselves. They can also select travel preferences like solo, group, or budget travel. This information helps others decide if they want to travel with them.

Travel Plan Module

Here, users can add their travel details like starting city, destination, travel date, and type of trip. This data is used by the system to find matching companions who have similar travel plans.

Search & Match Module

This is where the system checks for other users with similar travel routes and dates. The website shows a list of suitable matches. The user can then check the profiles of those people and decide if they'd like to connect

Chat & Connect Module

If a user finds someone interesting, they can send a request to connect. If the other person accepts, they both can chat inside the website. This helps them discuss travel plans and get to know each other before meeting.

Feedback & Rating Module

After their journey, users can rate their travel companion and write a short review. This helps others know who is polite, respectful, or good to travel with. It builds trust on the platform.

Safety & Verification Module

To make the platform safe, users can verify their ID and get a "verified" badge. If someone behaves badly, others can report or block them. This makes the platform feel more secure—especially for girls or first-time travelers.

Admin Panel Module

This part is for the admin to manage users and monitor reports. The admin can remove fake users, check complaints, and keep the platform clean and working well.

Admin Panel

Future Scope

The Travel Companion Finder project has significant potential for future expansion to make travel safer, smarter, and more social. A **mobile app version** can provide travelers with easy access on the go. An **emergency SOS button** can enhance user safety by instantly alerting authorities or trusted contacts in case of danger. Additionally, implementing **AI-based smart matching** can improve the quality of companion suggestions by analyzing user preferences, travel history, and social compatibility. These enhancements aim to create a more convenient, secure, and enjoyable travel experience, making the platform highly relevant for modern travelers

Conclusion

In conclusion, the Travel Companion Finder addresses the challenges of solo travel, such as safety, high costs, and social isolation. It connects like-minded travelers, enables trip planning, and offers secure chat communication. Ratings and reviews promote trust, while the admin panel ensures safety and monitoring. The system's modular design makes it user-friendly and scalable. Future enhancements, like a mobile app, group travel support, emergency SOS alerts, and AI-based matching, can further improve convenience and security. Overall, the platform combines safety, social interaction, and cost savings, making solo travel safer, more enjoyable, and confident for all users.

Thank You
